Overview 👋

We invite you to try this reviewer qualification, even if the examples are different than your expertise. The instructions provide you all the information you need to know! **Pass the assessment and join the Holodeck review team**. The assessment contains knowledge check questions and a sample review exercise. This should take you **~3 hours**, please do not spend more than 4.

How Holodeck works

- Holodeck creates realistic workplace tasks to train and evaluate AI models. Tasks should be challenging enough to test the models, while still being fair and solvable for a skilled professional.
- Each task has three parts: a prompt (the assignment given to the model), supporting files (the working context), and a rubric (individual grading criteria that serve as the answer key).
- As a reviewer, you're the last check before a task is used. You'll review the prompt, files, model responses, and rubric; fix any issues you find; and decide whether the task moves forward or is discarded.

What happens before you review a task

1. A task creator draws on their professional experience to write the prompt, build the supporting files, and draft the rubric.
2. Several models attempt the task, and an automated grader scores each response against the rubric. The grader is useful, but it takes the criteria literally. It cannot always tell whether a response is genuinely wrong, a rubric criterion conflicts with the source material, or a correct answer has simply been overlooked.
3. A quality control (QC) report flags potential issues with the task. It catches a lot, but not everything.
4. The task reaches your review queue. You supply the judgment the grader and QC report cannot: Is the task fair and solvable? Does it reflect the source material? And does it test what a professional would actually need to get right?

What makes a strong task

A strong Holodeck task tests real professional judgment and grades the work fairly. Every task should meet these three standards:

- **Correct work isn't penalized:** the rubric doesn't reject valid answers.
- **Good judgment is rewarded:** the rubric gives credit for handling the task's challenges.
- **The difficulty is meaningful:** the challenge reflects real professional work with a solvable outcome.

What the reviewer does

Reviewing is a different job from building. As a reviewer, you decide whether a submission is ready to ship: you'll take a submitted task, fix anything that's off, and confirm it's correct and fair before it trains and evaluates models. On each task you:

1. **Check the prompt:** Is the ask clear? Is it written like a natural human handoff?
2. **Check the files:** Is the answer being given away? Is there contradictory information making the task unsolvable?
3. **Check the model attempts & grades:** Is the grading fair? Are failures being caught?
4. **Check the rubric:** Are the criteria atomic (i.e., checks one thing), self-contained, and accurate?
5. **Decide whether the task ships:** Make any edits needed to finalize the task or discard if it is unsalvageable.

✍️ Step 1: The prompt

The prompt is the ask for the model. The prompt should look like you're assigning work to a trusted colleague -- they know the domain, they understand what you're asking, and you're giving them all the resources to do it. Thus, the prompt should be natural and realistic (i.e., what you would say to a person or the model when asking a question).

Some things to check in the prompt:

- **Highly prescriptive prompts** → reword so they read as natural, short handoffs. If needed, the detail belongs in the files, not the prompt.
- **Prompts that open with an unnecessary persona** ("You are an accountant at my firm...") → delete the persona content.
- **Prompts where the deliverable is unclear**, or that could be satisfied without doing the actual work → make the ask obvious in one read. **There must be a deliverable requested** (though if a professional in the field would read this prompt and produce a deliverable and the model is not doing so that's a valid failure (e.g., draft a memo for my client containing their 2024 tax advice, clearly requests a memo output, whereas, draft my client's tax advice does not).
- **Prompts that accidentally telegraph the answer or the trap** → remove the telegraphing; difficulty is intentional.

Bad prompts	Improved prompts
Persona opener -- this is not how a colleague hands off work. The persona or role should be apparent based on the context of your files (the environment). *"You are a Senior Accountant at Ironbridge Area School District (a mid-size Pennsylvania public school district), preparing the district's GASB 34 conversion for governmental funds for the fiscal year ended June 30, 2025. Provide the reconciliations between the governmental fund balance sheet and the statement of net position, and between the statement of revenues, expenditures, and changes in fund balances and the statement of activities, with supporting schedules for capital assets, long-term liabilities, and accrual adjustments."*	Drops the persona, keeps the ask -- district and year-end are recoverable from the files. *"Prepare the district's GASB 34 conversion for governmental funds for fiscal 2025. Provide the reconciliations from the fund statements to the government-wide statements, with the supporting schedules."*
Handholding -- don't dictate the method step-by-step. You'd expect your real-life colleague to operate without such specificity. *"Using the supporting files for Cattle Dog Golf Course, prepare a March-August 2026 FP&A business review for ownership that determines whether the current peak-season plan should be revised. Reconcile the operating forecast, tee-time demand, pricing support, customer/membership evidence, past financials, management emails, vendor proposal, and capital project quotes into a defensible recommendation. Separate operating performance from cash timing, including debt service, one-time fees, and capital project payments, and show whether the course stays above its required minimum cash balance in each month. Build a base case, a downside case with 10% lower rounds played, and an upside case with the proposed green-fee increase, and present the monthly results side by side. Quantify the impact of the irrigation vendor proposal on both operating margin and cash, and state whether it should be accepted, deferred, or declined. Flag any assumptions in the management emails that conflict with the historical financials and explain which source you relied on. Close with a one-page executive summary that gives a clear revise-or-hold recommendation and lists the three actions ownership needs to take before April 1."*	Points to the spec instead of repeating it -- Names the deliverable and the decision, drops the method. A real colleague would already know to reconcile the forecast, demand, and cash timing without being walked through it. *"Ownership wants a March-August 2026 business review for Cattle Dog Golf Course. Using the files in the folder, tell us whether the peak-season plan should be revised and back the recommendation with the numbers."*
Reveals the traps -- if you name the planted errors, the task isn't useful for training AI. Ground your judgement as to whether the prompt or ask would occur at work. *"Review the attached payroll register and timecards for the Meridian warehouse and prepare the bi-weekly payroll reconciliation. Note that Johnson's overtime was keyed at 1.0x instead of 1.5x, the 401(k) match on the Henley record uses last year's 4% rather than the current 5%, and the March 14 shift for Duval appears on both the swing and graveyard sheets. Correct those and give me the reconciled totals."*	Names the deliverable, leaves the errors in the files -- the model knows what to produce (a reconciliation with flags), but has to discover the overtime multiplier, stale match rate, and duplicate shift itself. *"Payroll for the Meridian warehouse is closing Friday. Reconcile the register against the timecards and flag anything that needs correcting before we submit."*

Messages

📁 Step 2: The context files

Expires in: 6 hours

We're not super worried that the files look 100% realistic. Instead we want to make sure the task is solvable and that the files aren't horrible. Some things to check for:

- **Any file that hands over the answer** (reference rows, pre-computed totals, summary blocks that do the task's work) → this must be fixed.
- **Names, dates, or amounts that disagree across files** → fix if it's not possible to determine which is the correct source of truth. A big model failure is getting confused by proper source of truth that an expert would know, or when you add a deliberate inaccuracy as a trap, but if the inconsistencies make the problem unsolvable, please remove them!
- **Placeholder tells** (obviously fake names, unrealistic file types, lorem-ipsum content) → if it's quick to fix, please do so. If not, but the files are still passable then you can just flag this. If not, and you think the task is worthless from this, please discard the task.
- **Internal notes** → Remove planning text, editor comments, codenames, or other material that reveals how the task was built.
- **PII or confidential internal info** → please scrub of any real personal or confidential information. Fictional names and information are acceptable and encouraged.

You are checking the work, not rebuilding the whole task. If a file problem invalidates criteria (e.g. a value a criterion depends on is wrong in the file), fix the rubric or fix the file, whichever is easier.

📊 Step 3: The model attempt + grades

A model has attempted this task and been graded against the rubric set you will be reviewing. Please use this to help guide your initial rubric review below. If the model attempt shows meaningful failures but they are not caught in the rubric, you'll want to add those criteria. If the rubric is failing something that's correct, we'd like you to make sure you edit that in the rubric below.

A couple of things to keep in mind while you review the model attempt and grades:

- **Are the failures being caught?** If you can see the model doing something genuinely wrong that no criterion fails it for, that's a missing criterion — note this so you can add the criterion below. Real failures with no rubric coverage are one of the most valuable things you can catch in this review.
- **Is the grading fair?** Read the PASS/FAIL calls and rationales. If a call looks wrong because the *criterion* is ambiguous, too strict, or not self-contained — fix the criterion in the table. If the criterion is fine and the grader just misread, leave the criterion alone and note it in your comment.

📝 Step 4: Rubric Review

A rubric is the answer key, which a model is graded against, made up of multiple criteria.

Common issues and questions

- **Vague or not self-contained criteria:** Ensure the criterion can be graded objectively. Therefore do not write "the response is correct" or "the response is well-written" as those are vague / not objectively graded.
- **Overly long criterion:** criterion with excessive descriptions. For these please make sure everything in the criterion is actually needed for grading.
- **The same thing is graded twice:** Two criteria reward or penalize the same decision. Remove the duplicate.
- **Several checks in one criterion:** Use one independently gradable requirement per criterion. No criterion should contain multiple, unrelated checks (e.g., the revenue is $3,000 and the costs are $1,000).
- **No expected answer:** State what a correct response must conclude, report, or show.
- **Criteria that support only one of multiple defensible answers:** Adjust criterion so that they support all possible defensible answers not only the single annotator conclusion.
- **The task is hard for the wrong reason:** Trivia, ambiguity, or volume creates difficulty without testing useful professional judgement. Keep only criteria that test real judgement.
- **An important trap is not scored:** The task includes a real issue, but no criterion rewards the model for finding or fixing it. Add the necessary criterion.
- **Criteria that vaguely suggest 'don't hallucinate':** Delete these criteria. They are impossible to grade. Criteria must be specific enough that they can easily be graded by looking only at the response, saying the answer should be right or the model shouldn't hallucinate is always impossible to grade.
- **Criteria that say 'approximately':** Criteria with 'approximately' are also impossible to objectively grade. One person may think a 10% range is acceptable where another may think a 1% range. Please provide the actual acceptable range! The reverse also applies -- a figure stated directly in the files (e.g., a $1,400,000 threshold from the planning memo) should be required exactly; adding a range there just lets wrong answers pass.
- **Criteria that force a specific format that was not requested:** Criteria that say 'the output must be a pdf file' when the prompt requests only a basic output. Please adjust either the prompt or the rubric to be appropriate. The caveat here is if every professional in the domain knows this format would be the only possible format it's ok to include (note: this usually is only the case for excel files or spreadsheets so that formulae can exist).
- **Criteria that are 'extra-credit':** Criteria that really are not needed. We really want to have criteria that professionals in the field would be interested in, so a criterion requesting that bullets be indented by 0.25 vs. 0.3 is irrelevant. Think through what you actually really care about when getting outputs!
- **A criterion is inaccurate:** The key conflicts with the source files, rejects a valid method, or requires an incorrect result. Fix in rubric or files, whichever is easiest.
- **A required fix breaks another criterion:** Correcting a wrong input changes every total built on it, so double-check whether your change affects other criteria and outputs.
- **Criteria that point to the source instead of stating the answer:** "The response uses the correct royalty rate from the licensing agreement" makes the grader re-derive the answer. Write the value in: "The response applies the 6.5% royalty rate to Q3 net sales."
- **Negative criteria that reward silence:** A criterion phrased as "the response does not do X" is passed by a response that never addresses X at all. Instead, state what a correct response must say. Example: replace "The response does not flag the duplicate invoice as fraudulent" with "The response identifies the invoice as a duplicate posting."

➡️ Step 5: Determine routing

This is the final decision. You decide if:

- ✅ The task is edited and ready to be delivered. This means making sure the task is excellent and you're confident in the quality overall.
- ❌ The task is not salvageable. You should determine this early, so no need to make any edits.

Section 1: Reviewer concept check

Question 1

Which prompt is the better prompt for this project?

Prompt A	Prompt B
The clinical team just received the topline data from their Phase 2 study and wants to know whether it supports advancing to Phase 3. Review the protocol, statistical analysis plan, and results in the folder and write a document with your read.	Using the attached Phase 2 study protocol, the statistical analysis plan, and the topline efficacy tables, assess whether the trial met its primary endpoint and what the data support for a Phase 3 design. Deliverables: (1) a determination of whether the primary endpoint (change from baseline in the target score at week 12) reached statistical significance, stating the point estimate, confidence interval, and p-value; (2) a summary of the key secondary endpoints and any multiplicity concerns; (3) a table of treatment-emergent adverse events by arm with the between-arm differences; and (4) a one-page recommendation on the Phase 3 dose and primary endpoint with the supporting rationale. Cite the source table for every figure.

- ○ Prompt A
- ○ Prompt B

Question 2

A task's prompt reads, "Prepare the year-end close memo. Be sure to check whether the May invoice was double-posted, apply the updated 7.25% rate from the amended contract rather than the original 6.8%, and confirm the accrual sign in cell D14." The rubric grades all three items.

What should the reviewer do?

- ○ Leave it. The prompt reads like a plausible note from a manager, and the prompt and rubric agree -- exactly the consistency reviewers are asked to check for.
- ○ Leave the prompt but delete the three criteria, since grading items the prompt already answers rewards transcription rather than analysis.
- ○ Strip the three pre-solved answers from the prompt, leaving a plain drop-off ("Prepare the year-end close memo for the file"), and keep the criteria.

Messages

Expires in: 6 hours

- ○ Move the three items out of the prompt and into a short manager's email in the context files, so the model can still be told which errors to correct.

Question 3

A criterion reads, "The response identifies invoice INV-2291 as a duplicate posting of INV-2288." Run 3's memo says, "INV-2291 duplicates INV-2288 and should be reversed before close." The automated grader marked Run 3 FAIL with the rationale "response does not use the phrase 'duplicate posting.'"

What should the reviewer do?

- ○ Rewrite the criterion to list acceptable phrasings ("duplicate," "duplicates," "double-posted") so the grader cannot misread it again.
- ○ Leave the criterion as written and note the grader's misread in your review comment. The criterion is specific, self-contained, and Run 3 plainly meets it.
- ○ Delete the criterion. A criterion the grader can misapply is not objectively gradable.
- ○ Broaden it to "The response correctly handles INV-2291" so any valid phrasing passes.

Question 4

A task asks the model to reconcile Q2 warehouse receipts against purchase orders. The planted trap: the supplier switched from shipping in cases of 12 to cases of 10 on May 1 -- each packing slip states the case quantity. While checking the context files, you find the following:

1. The folder includes last quarter's completed reconciliation, in the same layout, with Q1's figures (all at 12 per case). The folder contains no Q2 figures.
2. The receiving log and the supplier's packing slip disagree on the May 14 delivery by 24 units. The packing slip matches the signed delivery receipt. The log does not.
3. A "Notes" tab in the receiving workbook reads: "Note for model run -- the case size changed in May, make sure that's reflected."
4. The workbook's summary tab already converts every receipt to units, using 12 per case through April and 10 per case from May onward.
5. The prompt says "Ridgeline Foods," the purchase orders say "Ridgeline Foods LLC," and the packing slips say "Ridgeline."

Which findings must be fixed before the task ships?

- ○ #3 and #4.
- ○ #1, #3, and #4.
- ○ #2, #3, and #4.
- ○ #3, #4, and #5.
- ○ #1, #2, #3, and #4.

Question 5

A task's prompt reads, "Put together the budget for the spring alumni reception using the venue quote, the caterer's proposal, and the RSVP list in the folder."

The files contain: a venue quote of $4,200 plus a 10% service charge; a caterer's proposal at $38 per person with no other fees listed; an RSVP list with an alumni tab (89 yes, 12 maybe) and a faculty tab (29 yes, 7 maybe), where 6 people appear as "yes" on both tabs; and quotes for AV rental ($650) and printing ($310). Nothing in the files says how "maybe" responses should be treated for catering.

The rubric contains these five criteria:

1. The budget applies the 10% service charge to the catering cost.
2. Catering cost is either $4,256 or $4,978.
3. The budget lists AV rental at $650 and printing at $310.
4. The response does not double-count the 6 guests who appear on both RSVP tabs.
5. The response states how the "maybe" RSVPs were handled: either by flagging the ambiguity or by stating the assumption used for the catering count.

Which criteria need to be edited?

- ○ #3 and #4 only.
- ○ #1, #3, and #4.
- ○ #3, #4, and #5.
- ○ #1, #3, #4, and #5.
- ○ #1, #2, #3, and #4.

Question 6

A rubric criterion requires a specific value. All four model runs report that same value and pass the criterion. When you trace the figure through the context files yourself, the files support a different value.

What type of issue is this?

- ○ The difference is acceptable. The rubric author's value takes priority because the author built the task and verified it during construction.
- ○ The rubric is validated. Four independent runs converging on the rubric's value is stronger evidence than one reviewer's re-derivation.
- ○ The criterion can cause correct work to fail. This is a critical rubric issue that must be fixed.
- ○ It's a minor documentation gap. Note the discrepancy in the review comment but leave the criterion unchanged.

Question 7

Which is the best option for a rubric criterion?

- ○ The response identifies the 24-month potency result for lot -003 as out-of-trend by citing deviation DEV-24-0187.
- ○ The response identifies the potency result that the deviation log flags as out-of-trend for lot -003.
- ○ The response identifies the OOT result, cites the deviation, and recommends corrective action within regulatory timelines.
- ○ The response identifies the 24-month potency result for lot -003 as out-of-trend and does not attribute it to analytical error.

Question 8

A criterion reads, "The response reports the 61-90 day reserve as $89,120, computed as 12.8% of the bucket's $801,746 base." The base and rate both trace correctly to the source workbook.

What should the reviewer do?

- ○ Leave it. Both inputs verify against the sources, so the criterion is sound as written.
- ○ Revise the criterion to require a reserve of $102,623 instead of $89,120.
- ○ Delete the computation and require only that a reserve for the bucket is reported, since embedded math is where errors like this creep in.
- ○ Widen the tolerance so responses matching either figure pass, since both trace to the same verified inputs.

Messages

Expires in: 6 hours

Question 9

A criterion reads, "The memo recommends terminating the vendor contract at renewal." All four runs failed it. Every run hedged ("terminate or renegotiate"). You check the sources: the contract's renegotiation path requires a waiver the client already declined in writing.

What should the reviewer do?

- ○ Delete it. A criterion that no run passes is unpassable by definition, and unpassable criteria only add noise to the grades.
- ○ Keep it as written. The declined waiver makes a committed termination recommendation cleanly achievable, so the hedges are real failures.
- ○ Revise it to accept either a termination recommendation or a termination-or-renegotiate hedge. A 0-for-4 criterion is measuring the rubric, not the models, and "support all defensible answers" is house guidance.
- ○ Revise it to require that the memo discusses termination and weighs the alternatives, so responses get credit for engaging seriously with the question.

Question 10

A criterion requires "approximately $2.5K unfavorable" but does not define what counts as approximately. One response gives $2,542.90 and another gives $2,600.

How should the reviewer handle this?

- ○ Leave the criterion as written and let each grader decide what counts as approximately. Graders are trusted domain experts.
- ○ Require exactly $2,542.90 and reject any rounded value, since precision is what separates strong responses.
- ○ Delete the dollar figure and require only that the response identifies the variance as unfavorable.
- ○ Replace "approximately" with an explicit accepted range that includes the exact value and any reasonable rounding.

Question 11

A rubric criterion reads, "The response uses the correct royalty rate from the licensing agreement."

What should the reviewer do?

- ○ Leave it. The agreement is in the context files, so the grader can look the rate up and verify the choice themselves.
- ○ Revise it to "applies a reasonable royalty rate," so the grader has flexibility when a response defends a different rate.
- ○ Revise it to state the answer: "The response applies the 6.5% royalty rate from the licensing agreement to Q3 net sales."
- ○ Revise it to state the full answer: "The response uses the licensing agreement's 6.5% rate on Q3 net sales and reports Q3 royalty expense of $412,500."

Question 12

You correct criterion 6 to use the 7.25% rate from the amended contract, which the sources make governing, instead of the superseded 6.8%. Criteria 9 and 13 embed dollar totals that were computed at 6.8%. Nothing flagged them, and most runs' reported totals still match them. What should the reviewer do?

- ○ Stop at criterion 6. Editing criteria that nothing flagged is over-editing, and most runs still match the embedded totals.
- ○ Widen the tolerances on criteria 9 and 13 so totals computed under either rate pass, preserving the existing run grades.
- ○ Revert the criterion 6 fix. An internally consistent rubric beats a partially corrected one.
- ○ Recompute everything downstream of the rate and update criteria 9 and 13 to the 7.25% totals.

Question 13

A payroll-reconciliation task is intended to test whether the responder notices duplicate source entries. The employee's March 14 shift appears on both the morning and evening timecards but should be included in payroll only once. Criterion 7 currently reads, "The response does not count the employee's March 14 shift twice in the payroll totals."

Attempt 1 copies the total from the payroll register, where the shift appears only once. It does not mention the employee, March 14, or the duplicate timecard entries. The grader marks Attempt 1 as passing criterion 7. Rubric criteria should assess distinct, observable behaviors.

Which revision best addresses the gap in the rubric?

- ○ Change Attempt 1's grade to FAIL without changing criterion 7, because the intended behavior matters more than the criterion's wording.
- ○ Leave criterion 7 unchanged because the final total is correct, and recognizing the duplicate is not independently relevant.
- ○ Use two criteria: one requiring the response to identify the duplicated March 14 timecard entry, and another requiring the reconciled payroll total to include the shift exactly once.
- ○ Replace criterion 7 with one criterion requiring the response both to identify the duplicate and to count the shift once.

Section 2: Case study

You are the reviewer for the task below. This task has been condensed for this assessment -- Holodeck tasks are much longer! Note: all names and personal information in this task are fictional.

✍️ Prompt - Original

"Prepare Alison Boyd's finalized July 2026 payout statement covering both of her properties, 151 Juniper Terrace and 9338 Marina Blvd, with a separate reservations table per property using the columns Guest name, Gross revenue amount, Cleaning fee, Management fee (18% of gross), Channel commission, and Your earnings, in that order. Below that, add an "Income and deductions" table and a summary showing Earnings from reservations, Income and deductions, and Total payable. Remember Vrbo and Airbnb use different commission rates, so check the channel before applying it. Note any unresolvable discrepancies in a separate note, one bullet per issue."

Question 14: Prompt - Final

- Please write the final prompt below. If the prompt looks good, paste it as is. If you believe it needs edits, revise it.

Question 15: Context Files - Issues

- Note anything in the context files that should be fixed before this task ships.

Model Attempt, and Rubric

Attempt 1 — model deliverables

The files the model produced for Attempt 1, exactly as delivered. Open and assess them against the rubric and the sources. Hint: The final Total Payable value is $3,129.10 so no need to resolve everything!

Rubric and model scoring

#	Criterion	Attempt 1
1	The statement uses the Ashfield letterhead with the Market Street address, labeled "Statement of account" for Alison Boyd, period July 2026.	✅
2	Each of the two properties — 151 Juniper Terrace and 9338 Marina Blvd — has its own reservations table with columns in this order: Guest name, Gross revenue amount, Cleaning fee, Management fee, Channel commission, Your earnings.	✅
3	The management fee is calculated as 18% of gross booking value for every reservation.	✅
4	The correct channel commission is used for each platform.	❌
5	Heidi Green's July 19–23 reservation ($1,641.00, Vrbo) is excluded from Boyd's July earnings, per the payment dispute (NB-DSP-2026-0714992) and clause 9.3 of the management agreement.	❌
6	The statement is professional, clear, and well formatted.	✅
7	The total payable is approximately $3,129.	❌
8	The income and deductions table lists the July 12 late-checkout fee of $87.50 as income and the July 17 HVAC filter service of $94.35 as a deduction, the summary's "Income and deductions" line equals -$6.85, and the statement includes the payment-timing footer verbatim.	✅
9	Each reservations table ends with a totals row that is the sum of each numeric column.	✅
10	For Jessica Nichols's July 16–18 Booking.com reservation at 9338 Marina Blvd ($459.40), the missing TOTAL PAID is flagged in the unresolved-issues note.	✅
11	Each property's table contains exactly the July-departing reservations — Anthony, Reynolds, Snyder for 151 Juniper Ter; Gonzalez, Nguyen, Pearson, Nichols, Hansen for 9338 Marina Blvd — with no reservations missing or added.	❌

Question 16: Rubric - Edits

- How would you edit this rubric, if at all? Please cite the criterion # in your answer and explain why you would change it.

Question 17: Your verdict on this submission

- ○ Ship as is -- nothing needs changing.
- ○ Fix and ship -- the task needs edits but is salvageable.
- ○ Reject -- this many defects means the task is unsound underneath.

figures from Q2"
Rebecca W. Oct 9

> Replying to @MichaelZ-AQJK6EQX: Hi, can I clarify something on question 4? when stating "The folder includes last quarter's completed reconciliation, in the same layout, with Q1's figures (all at 12 per case). It contains no Q2 figures." - what does "it" r...

I'm wondering the same thing, I've answered as if it just means Last Quarter's completed reconciliation contains no q2 figures.
CeliaH-KTRW3KZ6 Oct 6

I decided to attempt this qual w/o allowing myself enough uninterrupted time; I am on the case study and need more time because I have been interrupted throughout by various unexpected "noise". I am going to exit work mode and hope that this allows me to reopen tomorrow to complete it (I saved my completed answers).
TracyM-DD7MWJP6 Oct 1

Are we meant to continue adding to the rubric when it hasn't covered all of the information, or only edit what is provided.
Zoey G. Oct 1

I'd like to request an extension on this qual please. I started working on it but I won't have time in my schedule to finish it today. I'll be able to come back tomorrow to finish. Thank you!
Kerri R. Sep 26

> Replying to @RoryK-ERZ9JNRC: Thanks, you were right... it is because I am running a Linux/Windows dual boot and the Debian version of Linux I am using has a different binary format for date and time codes... as a result I have to reset the clock every ti...

You can apply a registry edit to Windows to make it interpret and record the time the same way Linux does so you don't have to deal with this again. You have to set `RealTimeIsUniversal` to 1 in a certain place. Google it, there's tons of tutorials.
AlyxF-YX4HGDGQ Sep 23

@Admin JM Hi there. I had to step away from my computer for a bit, and there isn't a reasonable amount of time left for me to complete this submission. I'm pretty deep into section 2 now though. I won't be able to submit this submission page past expiry-- closing out of my computer for the weekend and will have to re-enter through the dashboard qualifications page, but I'm scared to lose access after having worked on it for a couple hours now. If there's any way of ensuring that I'll still have access to this in a couple of days, I'd greatly appreciate it!
